

Lemonade Works

Minimum Viable Synthetic Enterprise Corpus

Initial Business Scenario

A prospective customer has requested **500 servings of lemonade for an event at 3:00 p.m. the following day.**

The customer would like a prompt commitment. Lemonade Works has fulfilled large orders before, but current information about production capacity, staffing, inventory, supplier availability, pricing, and approval authority is distributed across several systems.

Workshop participants must determine whether the company should accept the order and prepare a defensible recommendation.

The intended answer is not a simple yes or no. A strong analysis should conclude that the order is **potentially feasible, but should not be accepted unconditionally until several operational dependencies and approvals are resolved.**

A. Core Company and Organizational Records

ID	Record	Suggested source	Owner	Access	Training purpose
A1	Welcome to Lemonade Works	Confluence	Internal Communications	All employees	Introduces the company, history, products, and current growth stage
A2	Company Organization and Leadership	Confluence or employee directory	People Operations	All employees	Helps learners identify organizational roles and likely decision-makers
A3	Employee and Team Profiles	Employee directory	People Operations	All employees	Supports people discovery, expertise identification, and ownership questions
A4	Locations and Operating Hours	Confluence	Operations	All employees	Establishes where production can occur and which locations are available

ID	Record	Suggested source	Owner	Access	Training purpose
A5	Business Glossary	Confluence	Enablement Team	All employees	Defines terms such as large order, event order, production capacity, committed order, and approval

Recommended fictional roles

- Maya Chen — Founder and Chief Executive Officer
- Rafael Ortiz — Vice President of Operations
- Priya Shah — Finance Director
- Jordan Brooks — Head of Sales
- Evelyn Reed — Food Safety and Quality Manager
- Sofia Almeida — Regional Operations Manager
- Marcus Lee — Procurement Lead
- Avery Thompson — Technology and Systems Lead
- Nia Johnson — Downtown Stand Manager
- Theo Martin — Event Sales Representative

B. Product, Production, and Quality Records

ID	Record	Suggested source	Owner	Status	Access	Training purpose
B1	Standard Lemonade Recipe, Version 3.2	Confluence	Food Safety and Quality	Current	All employees	Authoritative recipe and yield assumptions
B2	Original Founder's Lemonade Recipe	Confluence	Founder	Outdated but still indexed	All employees	Creates a plausible but superseded source
B3	Product and Packaging Catalog	Confluence	Product Operations	Current	All employees	Defines serving sizes, container options, dietary variations, and packaging needs

ID	Record	Suggested source	Owner	Status	Access	Training purpose
B4	Food Safety and Allergen Handling Policy	Confluence or SharePoint	Food Safety and Quality	Current	All employees	Introduces mandatory procedural constraints
B5	Daily Production Capacity Guide	Confluence	Operations	Nominally current but incomplete	All employees	States normal capacity without accounting for current equipment failure
B6	Equipment Maintenance Log	SharePoint list or maintenance system	Operations	Current	Operations and managers	Reveals that one commercial juicer is unavailable
B7	Temporary Production Workaround	Confluence	Downtown Stand Manager	Current but locally authored	Operations	Describes a slower manual process that partially restores capacity
B8	Large-Order Packaging Checklist	Confluence	Event Operations	Current	All employees	Introduces packaging, cooling, labeling, and transport requirements

Deliberate contradiction

The founder's original recipe produces more servings per batch because it uses a smaller serving size and less lemon concentrate. The current quality-approved recipe produces fewer servings but is the authoritative standard.

Learners should not use the original recipe merely because it appears earlier or seems more efficient.

C. Customer and Sales Records

ID	Record	Suggested source	Owner	Status	Access	Training purpose
C1	Customer Request: Greenway Summer Festival	Outlook email thread	Event Sales	Current	Sales, operations managers	Provides the request, timing, quantity, venue, and customer expectations
C2	Sales Representative's Preliminary Reply	Outlook draft or sent email	Event Sales	Current	Sales	Shows that the representative implied the company could probably fulfill the order
C3	Large-Order Pricing Sheet, FY2025	Confluence	Sales Operations	Outdated	Sales and finance	Creates pricing ambiguity
C4	Large-Order Pricing and Discount Policy, FY2026	Confluence	Finance	Current	Sales, finance, managers	Provides current pricing and discount limits
C5	Greenway Customer Profile	CRM-like synthetic record	Sales	Current	Sales and selected managers	Shows prior order history, payment reliability, and potential strategic value
C6	Customer Commitment and Approval Policy	Confluence	Legal and Finance	Current	All customer-facing employees	Establishes who may make binding commitments

Deliberate ambiguity

The customer email requests 500 “servings,” while an older sales note refers to 500 “bottles.” These are not equivalent in cost, packaging, or production effort.

A good learner should identify the discrepancy and seek clarification rather than silently choose one interpretation.

D. Inventory, Procurement, and Supplier Records

ID	Record	Suggested source	Owner	Status	Access	Training purpose
D1	Current Ingredient Inventory Snapshot	Inventory spreadsheet or SharePoint list	Operations	Current as of that morning	Operations and managers	Shows ingredients sufficient for approximately 220 servings
D2	Preferred Supplier Agreement	SharePoint	Procurement	Current	Procurement, finance, selected managers	Contains normal lead time, price protections, and emergency-order terms
D3	Supplier Service Disruption Notice	Outlook email	Procurement	Current	Procurement and operations managers	Indicates that normal next-day delivery is temporarily unavailable
D4	Approved Backup Suppliers	Confluence	Procurement	Current	Operations and procurement	Identifies a same-day alternative with a higher cost and quality verification requirement
D5	Emergency Purchase Authorization Policy	Confluence	Finance	Current	Managers	Defines spending thresholds and required approval
D6	Procurement Lead's Informal Supplier Notes	Outlook or Teams-like message	Procurement	Current but informal	Procurement	Contains useful context that has not yet been incorporated into official documentation

Deliberate information-quality issue

The preferred supplier agreement still states a normal one-business-day lead time. The disruption email temporarily overrides that expectation.

Learners should recognize that an authoritative contract can still be insufficient for understanding the current operating situation.

E. Staffing and Operational Records

ID	Record	Suggested source	Owner	Status	Access	Training purpose
E1	Tomorrow's Staffing Schedule	Scheduling system or SharePoint	People Operations	Current	Managers	Shows limited available labor
E2	Event Production Labor Calculator	Confluence	Operations	Current	All employees	Estimates labor required for different order sizes
E3	Employee Availability Responses	Outlook thread	Stand Manager	Current	Managers	Shows that two trained employees may be available for overtime
E4	Overtime and Temporary Labor Policy	Confluence	People Operations	Current	Managers	Establishes approval and scheduling requirements
E5	Delivery Vehicle Schedule	SharePoint list	Logistics	Current	Operations	Shows that the refrigerated vehicle has another booking until noon
E6	Greenway Festival Delivery Instructions	Outlook attachment	Event Sales	Current	Sales and operations	Introduces venue access and delivery timing constraints
E7	Large-Order Readiness Process, Version 1	Confluence	Former Operations Manager	Outdated	All employees	Provides an incomplete legacy process

ID	Record	Suggested source	Owner	Status	Access	Training purpose
E8	Large-Order Readiness Process, Version 2 Draft	Confluence	Current Operations Team	Draft and unapproved	Operations	Contains improvements but has not been formally adopted

Deliberate process problem

No single current, approved document describes the complete large-order decision process.

The company has:

- An incomplete approved process
- A more complete unapproved draft
- Expert practices held by experienced managers
- Policies distributed across several functional areas

This creates a natural bridge to a later workshop on documenting the process and developing a reusable Glean Skill.

F. Finance and Approval Records

ID	Record	Suggested source	Owner	Status	Access	Training purpose
F1	Event Order Margin Calculator	Spreadsheet	Finance	Current	Finance and selected managers	Allows evaluation of revenue, variable cost, backup sourcing, overtime, and delivery
F2	Standard Cost Assumptions	Confluence	Finance	Current	Finance and managers	Supplies current cost assumptions
F3	Confidential Pricing Strategy Memo	SharePoint	Finance Director	Current	Finance leadership only	Creates a legitimate permission boundary

ID	Record	Suggested source	Owner	Status	Access	Training purpose
F4	Delegated Approval Authority Matrix	Confluence	Finance and Legal	Current	All managers	Identifies who may approve discounts, emergency purchases, overtime, and customer commitments
F5	Prior Large-Order Performance Summary	Confluence	Finance and Operations	Current	Managers	Shows that large orders can be profitable but have historically caused operational disruption

Permission lesson

Participants without access to the confidential pricing memo should still be able to make a useful recommendation from permitted information.

They should acknowledge the limit rather than attempting to infer or reproduce restricted strategy.

G. Operational History and Organizational Learning

ID	Record	Suggested source	Owner	Status	Access	Training purpose
G1	Postmortem: Riverside Charity Order	Confluence	Operations	Current	All employees	Documents a prior late delivery caused by assuming nominal capacity
G2	Corrective Actions from Riverside Incident	Jira or task tracker	Operations	Mixed completion status	All employees	Shows that some improvements were completed and others remain open

ID	Record	Suggested source	Owner	Status	Access	Training purpose
G3	Leadership Discussion: Should We Accept More Event Orders?	Outlook thread	Executive Team	Current	Leadership and managers	Shows disagreement about growth, quality, and operational readiness
G4	Customer Feedback from Prior Events	CRM or survey document	Customer Success	Current	Sales and operations	Demonstrates customer expectations and recurring quality concerns
G5	Knowledge Gaps Identified During Expansion	Confluence	Operations Excellence	Current	All employees	Explicitly identifies weak documentation and unclear ownership

H. Initial Glean Resources

ID	Resource	Type	Status	Purpose
H1	Lemonade Works Search Guide	Glean training page	Current	Gives learners basic search orientation without revealing the scenario answer
H2	Evidence-Backed Business Brief	Glean Skill	Facilitator-provided example	Produces a structured brief with evidence, uncertainty, and open questions
H3	Large-Order Readiness Skill	Glean Skill	Intentionally incomplete prototype	Gives learners something to critique and improve in a later workshop
H4	Event Order Intake Agent	Glean Agent	Future resource, not active initially	Becomes the basis of a later Agent-building exercise
H5	Golden Test Set: Large Orders	Evaluation document	Facilitator-only initially	Supports structured evaluation of the Skill and Agent

I. Role and Permission Design

The learning environment should include at least four participant perspectives.

Role	Typical access
General employee	Company pages, approved policies, product information, public process documentation
Sales employee	Customer records, sales emails, pricing policies, approved customer materials
Operations manager	Inventory, staffing, equipment, logistics, production records
Finance or executive leader	Margin model, approval data, selected confidential strategy records

Not every learner must have technically different access during the earliest pilot. The workshop can initially simulate role-based access through assigned information packets.

A later version should allow Glean's actual permission behavior to shape search and response differences.

J. Facilitator Truth Map

The facilitator should maintain a private record of the scenario's canonical facts.

Canonical facts

- The customer has requested 500 servings for 3:00 p.m. the following day.
- "Serving" has not yet been definitively distinguished from "bottle."
- Existing inventory supports approximately 220 servings under the current approved recipe.
- Normal production capacity is 600 servings per day.
- Current dependable capacity is approximately 350 servings because one juicer is unavailable.
- A manual workaround may raise capacity modestly but requires additional trained labor.
- The preferred supplier cannot meet the normal next-day delivery expectation because of a temporary disruption.
- A backup supplier can provide ingredients in time at a higher cost.
- Backup ingredients require an expedited quality check.
- Current staffing is insufficient without approved overtime or reassignment.
- The refrigerated delivery vehicle becomes available at noon.
- Delivery is feasible only if production and packaging are completed on schedule.
- The order remains financially attractive under several plausible scenarios, but margin decreases substantially with backup sourcing and overtime.
- The sales representative is not authorized to make an unconditional commitment of this size.
- An operations leader and financial approver must participate in the decision.

- The most defensible immediate response is conditional acceptance or a request for a short decision window while dependencies are confirmed.

Unacceptable conclusions

A response should be considered weak or unsafe if it:

- Accepts the order solely from the normal capacity guide
 - Uses the superseded recipe without qualification
 - Ignores staffing or delivery
 - Treats inaccessible information as evidence that no such information exists
 - Presents the unapproved process draft as binding policy
 - Assumes that a sales representative may make the final commitment
 - Fails to identify the ambiguity between servings and bottles
 - Produces a definitive recommendation without acknowledging unresolved dependencies
 - Invents missing inventory, supplier, or staffing information
-

K. Recommended Minimum Build Order

The entire corpus does not need to exist before the first pilot.

Essential first release

Build these records first:

1. Welcome to Lemonade Works
2. Company Organization and Leadership
3. Standard Lemonade Recipe
4. Original Founder's Recipe
5. Daily Production Capacity Guide
6. Equipment Maintenance Log
7. Customer Request Email
8. Preliminary Sales Reply
9. Current Pricing Policy
10. Customer Commitment and Approval Policy
11. Inventory Snapshot
12. Supplier Agreement
13. Supplier Disruption Email
14. Backup Supplier List
15. Staffing Schedule
16. Labor Calculator
17. Delivery Vehicle Schedule
18. Large-Order Process Version 1
19. Event Order Margin Calculator
20. Riverside Order Postmortem

Second release

Add:

- Role-based permissions
- The unapproved process draft
- Confidential finance materials
- Prior customer history
- Jira corrective actions
- Regional operating differences
- The prototype Skill
- The evaluation test set

This sequencing keeps the first environment manageable while preserving a credible path toward deeper Skill, Agent, governance, and business-function exercises.
